Serial No. 10/558,895 Atty. Doc. No. 2003P07420WOUS

## Amendments To The Claims:

Please amend the claims as shown.

## 1.-3. (canceled)

4. (currently amended) A method for relaying Internet Protocol (IP) packets to an external control component assigned to a network node in a communication network, the communication network having a plurality of network nodes and switching IP packets, the method comprising:

receiving an in-band IP <u>signalling signaling</u> packet at an <u>external</u> interface of the network node;

connecting the external interface to the external control component:

identifying the packet based on a protocol field of a header in the packet;

inserting a value <u>uniquely</u> assigned to the receiving <u>external</u> interface into a field of the header or an IP header in the packet, the value different than another value assigned to a non-receiving <u>external</u> interface of the network node;

identifying the packet as an RSVP (Resource Reservation Protocol) type of packet;
modifying a DSCP (Differentiated Services Code Point) field in the header of the packet
as a function of the receiving external interface, wherein the DSCP field contains the value
uniquely assigned to the receiving external interface; and

routing the modified packet to the <u>external</u> control component <u>connected to the external</u> interface, and thus relaying Internet Protocol (IP) packets to the external control component <u>assigned to the network node</u>.
